

### Hear top young scientists talk about their latest discoveries

**On: Wednesday 8 November 2017**

**At: The South Australian Museum**

School students are invited to a free, one-hour forum to hear South Australia's hottest new talent describe their scientific discoveries.

In past years, students have heard about fighting dust mite allergies with fish oil, giving the brain a natural boost after injury, tiny sensors for IVF embryos and the use of the Golden Wattle in mine rehabilitation. The talks will be aimed at year-9 and year-10 students, but students from upper primary up to year-12 are welcome.

Fresh Science is a national competition that selects passionate, talented young scientists to present their work to media and public.

Each scientist will talk for five minutes and take questions.

### Fresh Science at the Museum

**Come and hear what's fresh in science this year**

This November, you and your students can hear SA's top young scientists talking about their research in a forum designed to light a fire for science in young audiences.

**Where: South Australian Museum**

**When: Wednesday 8 November 2017**

**10.15am-11.15am and 11:45am-12:45pm**

**Cost: Free**

**Bookings: [www.eventbrite.com.au/e/fresh-science-at-the-sa-museum-tickets-39028327779](http://www.eventbrite.com.au/e/fresh-science-at-the-sa-museum-tickets-39028327779)**

**Using oranges to remove mercury**

**A new map of Mars' surface**

**A urine test for motor neurone disease**

Fresh Science, now in its 20<sup>th</sup> year, is sponsored in South Australia by the South Australian Museum, The University of Adelaide, Flinders University and the University of South Australia.
